选型参考 Reference for Type Selection

潜水搅拌机的选型是一项比较复杂的工作, 选型方案的正确与否直接影响到设备的正常使用, 作为选型的原则就是要让搅拌机在适合的容积里发挥充分的搅拌功能, 这个标准一般可用流速来确定。根据污水处理厂的不同工艺要求, 搅拌机选型的最佳流速应保证在 $0.15 \sim 0.3 \text{ m/s}$ 之间, 如果低于 0.15 m/s 的流速则达不到推流搅拌的效果, 如果超过 0.3 m/s 的流速则会影响工艺效果且造成浪费。所以在选型前, 首先要确定潜水搅拌机运用在什么场所, 如: 污水池、污泥池还是生化池; 其次是介质参数, 如: 悬浮物含量、温度、PH值等; 还有水池的形状, 水深甚至安装方式等都将对选型产生影响, 同时还应考虑到节能因素, 因为这将会影响到用户今后的运行成本。

为了满足在不同环境下都能达到最佳的搅拌效果, 我们为用户提供了多种型号的潜水搅拌机, 同时可提供选型服务。可参考下面的潜水搅拌机流场图。

The type selection of submersible mixer is a rather complicated job. The correctness of the type selection will directly affect the normal usage of the equipment. The principle for the type selection is to enable mixer to give full play to its mixing function in the appropriate volume. This standard can generally be determined by the flow velocity. In line with the different technological requirement of the sewage treatment, the optimum flow velocity for the mixer type selection shall ensure the velocity range of $0.15 \sim 0.3 \text{ m/s}$. In case of the flow velocity lower than 0.15 m/s , the effectiveness of agitation or mixing can not be achieved. In case of the flow velocity bigger than 0.3 m/s , the technological effectiveness will be affected and waste will be caused. Therefore, before type selection, it is necessary to determine what kind of environment the mixer will be used in, for instance, sewage tank, slag pond or biochemical pond. Secondly, the parameters of the medium such as content of the suspended substances, temperature, pH value as well as the shape of the pond, water depth and even the mode of installation and so on will all influence the type selection. Meanwhile, it is also necessary to consider the energy-saving factor, because this will influence the operating cost of the users in the future.

For the purpose of fulfilling the optimum mixing function in different environments, we can supply multiple types of the submersible mixers to the users and provide type selection service as well. Refer to the following diagrams of the flow field of submersible mixer.

潜水搅拌机运行模式 Operating Modes of Submersible Mixer

潜水搅拌机的安装定位对其搅拌效果有很大的影响，为了达到预期的运行效果，我们建议用户按照专业设计人员的要求去做，要充分考虑到水池的形状，进出水的位置以及搅拌机的水流反射到构筑物后引起的涡流等情况，尽量减少短路循环和死角的产生，避免与池壁的正面撞击而降低流速。参照下面的运行模式图，可帮助您合理选择搅拌机和安装形式。

The installation and positioning of the submersible mixers will have great impact on the mixing effectiveness. In order to get twice result with the half the effort, We suggest the users follow the advice of professional designers and fully consider the pond shape, position of the water inlet and outlet, as well as the vortex resulting from the water flow from the mixer reflex to the structures, try to reduce the short-circuit circulation and dead corners, and avoid the dashing of the flow against the pond wall to retard the flow velocity. Refer to the following diagrams of operating modes, which can help you make a reasonable selection of the mixers and the installation modes.
